## PROFESSIONAL SUMMARY

Software Engineer with a Computer Science degree and real-world experience shipping features in a live production codebase. Builds database-driven applications with Core Java, SQL, and JDBC, and has independently designed and deployed an AI-powered tool that integrates LLM APIs into a practical, end-to-end workflow. Comfortable working across the stack – from backend logic and DBMS design to responsive front-end UI – with a strong grip on SDLC and Agile delivery. Known for writing clean, testable code and turning ambiguous requirements into working software fast.

## EDUCATION

|                                                                                                                                    |                                 |
|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| <b>Narsimha Reddy Engineering College</b><br><i>B.Tech – Computer Science &amp; Engineering, CGPA: 7.02 (JNTUH)</i>                | Hyderabad, India<br>2022 – 2025 |
| <b>Arjun College of Technology &amp; Sciences</b><br><i>Diploma – Electrical &amp; Electronics Engineering, CGPA: 6.67 (SBTET)</i> | Hyderabad, India<br>2019 – 2022 |

## EXPERIENCE

| Software Developer Intern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | June 2026 – Present |

| <b>Resume Tailor</b>   <i>Python, NLP, LLM API (Gemini), PDF/DOCX Parsing, Git</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <ul style="list-style-type: none"><li>Built an end-to-end automation tool eliminating manual resume editing – users upload a Job Description and existing resume, and the system instantly identifies matched and missing keywords from the JD.</li><li>Implemented keyword extraction and comparison logic using NLP techniques; displays matched keywords (green) and missing keywords (red) side-by-side for quick decision-making.</li><li>Designed an interactive keyword selection step where users choose missing keywords to add; system calls the LLM API to regenerate the resume with selected keywords naturally integrated – preserving original structure and formatting – within 5 seconds.</li></ul> |

## TECHNICAL SKILLS

**Core Development:** Java (OOPs, Collections, Multithreading), JavaScript (ES6+, DOM), Python, SQL, HTML, CSS  
**Databases:** MySQL, JDBC, Query Optimization, Joins, Stored Procedures, DBMS Design & Normalization  
**AI Engineering:** LLM API Integration (Claude, Gemini, OpenAI), Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Databases, LangChain, Hugging Face  
**Engineering Practices:** Software Development Life Cycle (SDLC), Agile/Scrum, REST API Development, Unit Testing, CI/CD Basics, Debugging, Code Review, Git/GitHub  
**Tools:** Eclipse, VS Code, MySQL Workbench, Postman

## CERTIFICATIONS

**Goldman Sachs Engineering Virtual Experience** (Forage, 2025) – Applied Agile methodology, Git-based version control, and SDLC phases in a real-world engineering simulation.  
**SQL Certification** – Great Learning: Queries, joins, subqueries, stored procedures, and DBMS normalisation concepts.  
**Core Java Programming Certification** – Java SE, OOPs (all 4 pillars), Collections Framework, Exception Handling, and Multithreading.  
**Generative AI Fundamentals** – Coursera (2025): Introduction to large language models, prompt engineering techniques, and AI application development using LLM APIs.

## ADDITIONAL RECOGNITION

IBM Z Advocacy Hub – Global Rank #9, Q1 2026; earned 215 Advocacy Points through active contribution to the IBM Z & LinuxONE community.  
Published a technical article on Medium covering enterprise batch processing and database concepts on IBM z/OS.
